

EXPLANATION

- Assessment tract type – bedded barite**
- Moderate-potential (M) tract with moderate (C) certainty
 - Low-potential (L) tract with low (B) certainty
- Base data**
- USGS study area boundary
 - Proposed withdrawal areas
 - County boundaries

Figure 29. Inset map showing details of mineral-resource-potential tracts for bedded barite-type deposits in context of permissive geology and occurrences in the central part of the study area for the North-Central Idaho Sagebrush Focal Area.
